

Zone Remote Access

Manage email and documents remotely with just one application

Working remotely requires entry into multiple application environments, but imitating a remote desktop session with technologies such as VMware Horizon View (formerly VMware View) or Citrix XenApp is a tiresome process that requires professionals to watch minutes tick by as they wait for the Outlook, FileSite, or DeskSite logins to complete. People are frustrated when it takes 10 minutes to start their remote access solution when they only need to do 10 minutes of work.

Zone Remote Access enables legal professionals to be more efficient when they are away from their offices. It provides a unified experience for managing both email and documents through no-waiting entry into just one application. Not only does it improve productivity via extended email management functionality, it also offers business continuity in the event of office closures or disaster recovery efforts.

Product Features

- › Provides remote access to HP WorkSite, PSTs, file shares, and Exchange email through a web client
- › Supports all common functions for WorkSite and Exchange
- › Provides full and extended email functionality
- › Attaches documents from WorkSite, SharePoint, or file shares to email
- › Enables email management, such as drag-and-drop to WorkSite or indicate a filing location, and the ability to file email from the tool bar
- › Remotely accesses file shares and SharePoint document libraries
- › Features a familiar three-pane view, including preview, profile, history, where used, and versions
- › Provides lightweight document check-in and check-out functionality for Windows and Mac clients
- › Provides a unique and responsive user experience for tablets, Macs, and PCs, freeing tablet users from typical restrictions such as to which apps they may download content
- › Supports integrated check-in and check-out for Office Web Apps 2013, providing tablet users with similar experiences as in the office

Zone Remote Access provides a unified experience for managing both email and documents through no-waiting entry into just one application.

The Platform

Zone for Anywhere Working is a browser-neutral platform that infuses rich, web-based software functionality into industry standard enterprise products to streamline and automate core legal processes and break down information barriers. It allows professionals to manage content across multiple systems, including HP WorkSite, Microsoft SharePoint, Microsoft Exchange, and file shares, and it can be extended to other content repositories. The Zone for Anywhere Working product family empowers professionals working anywhere by providing them with secure, anytime access to their email and documents – even when that content is stored in multiple places.

Platform Support

Windows 2008, 2008 R2, 2012, and above

SQL Server 2005 or later

IIS 6 or above

.NET 4.0

Firefox 8.01, Chrome 16, and IE 9 or later browsers

Not only does Zone Remote Access improve productivity, it also offers business continuity in the event of office closures or disaster recovery efforts.

About Prosperoware

Prosperoware delivers a family of software products and integrated platforms to improve matter centricity, information governance, remote access, WorkSite and SharePoint integration, and pricing and experience management. Prosperoware enables lawyers and professional staff to manage a wide range of document-intensive processes without IT support across multiple systems, including HP WorkSite, Microsoft SharePoint, and any system that stores security in a SQL database.

Prosperoware clients include BakerHostetler, Berwin Leighton Paisner, Cravath Swaine & Moore, DLA Piper, Duane Morris, Hill Dickinson, Hughes Hubbard & Reed, Sheppard Mullin Richter & Hampton, and White & Case. Prosperoware has offices in Europe, Asia, and the United States. To learn more, visit Prosperoware's website at www.prosperoware.com.
