Milan NRL Handler

Automatically open documents from their new locations or request access to them

Sharing content quickly and easily is a no-brainer when it comes to efficient file transfer inside the law firm. But when sending links to content in HP WorkSite, documents are appended with .NRL extensions. This also happens when documents are moved between databases as a result of a consolidation or merger.

When professionals are sent NRLs to documents to which they do not have access, they receive errors that force them to contact the senders to either ask them to change security on the documents (if permitted), or just send them the documents. This type of impediment can discourage the use of document management systems.

Milan NRL Handler solves both of these challenges when used in conjunction with Milan Admin Move, Archive & Consolidate and Milan Self-Service. When documents have been moved to other databases, Milan NRL handler opens the documents from their new locations. When used with Milan Self-Service, Milan NRL Handler presents dialog boxes to professionals who do not have access with the option to request access.

Product Features

› When used with Milan Admin Move, Archive & Consolidate, Milan NRL Handler automatically redirects links to their new locations

› When paired with Milan Self-Service, Milan NRL Handler prompts professionals to request access from appropriate individuals, automatically grants access, or denies access based on the policies associated with the documents

> When documents have been moved to other databases, Milan NRL Handler opens the documents from their new locations.

The Platform

The Milan for Information Governance family of products is for organizations that use WorkSite, DeskSite, and FileSite (HP WorkSite product family) as their document management system. Milan promotes greater adoption of the WorkSite product family by empowering users to do more by improved administration without IT intervention.

For organizations that are focused on improving collaboration and work processes, Milan enables a more standardized approach in the WorkSite. For the information governance and risk management professional, Milan enables processes such as transfer of client files and confidentiality management, including ethical walls, litigation holds, data leakage, and investigations. Milan also provides functions for SharePoint and WorkSite Records Manager (WRM, formerly IRM).

Platform Support

IIS 6 or later

.NET 4.0 or later

SQL Server 2005 or later

iManage WorkSite 8.5 Server or later

DeskSite or FileSite 8.0 SP1 or later

Windows Server 2008 R2 or later (virtual or physical)

Localization support

IE8 or later, Chrome 16, Safari

When used with Milan Self-Service, Milan NRL Handler presents dialog boxes to professionals who do not have access with the option to request access.

About Prosperoware

Prosperoware delivers a family of software products and integrated platforms to improve matter centricity, information governance, remote access, WorkSite and SharePoint integration, and pricing and experience management. Prosperoware enables lawyers and professional staff to manage a wide range of document-intensive processes without IT support across multiple systems, including HP WorkSite, Microsoft SharePoint, and any system that stores security in a SQL database.

Prosperoware clients include BakerHostetler, Berwin Leighton Paisner, Cravath Swaine & Moore, DLA Piper, Duane Morris, Hill Dickinson, Hughes Hubbard & Reed, Sheppard Mullin Richter & Hampton, and White & Case. Prosperoware has offices in Europe, Asia, and the United States. To learn more, visit Prosperoware's website at *www.prosperoware.com.*
