

CAM – Data Protection for Business Continuity & Archiving

Hackers have become increasingly sophisticated, stealing and deleting data to hold it ransom. And organizations might not even know it. It takes an average of 280 days for a cyberbreach to be detected, so protecting your data and having a proven business continuity plan is critical.

Prosperoware CAM is a software-as-a-service (SaaS) platform for adoption and governance across multiple collaboration systems. CAM enables organizations to protect the data they need and minimize the data they do not, mitigating data chaos and reducing privacy & cybersecurity risks.

The CAM Data Protection feature set supports on-premises (iManage server 10.3+) and cloud systems (Microsoft Teams, OneDrive, SharePoint Online, NetDocuments, & iManage Cloud), allowing organizations to set policies to protect data in case of incidents.

Data Protection for Business Continuity & Archival is designed to address **(a)** the need for organizations to protect data from damaging hacks and ensure cybersecurity & privacy compliance, and **(b)** provide organizations with rapid document access in case of outages (due to cybersecurity issues, internal server issues, etc.).

KEY FEATURES:

- Rapid document access through a one-time password (OTP)
- Sync document metadata and security from on-premises (iManage 10.3+ server or above) and cloud (Microsoft Teams, OneDrive, SharePoint Online, NetDocuments, & iManage Cloud) to CAM
- Control over security – clients store documents in their own AWS or Azure private cloud, with only the metadata and security stored in CAM
- Configurable profile forms to search documents across a range of criteria (clients, matters names, data ranges, or other metadata specifications)
- Effortless profile search and document download in case of outage
- Document check-in when systems are back online

The screenshot displays the Prosperoware CAM web interface. At the top, there is a search bar and navigation tabs for Directory, Jobs, Users & Groups, Approvals, Administration, Analytics, Documents, Workspace, and Controls Center. Below the navigation, there are filter fields for System* (iManage), Server* (Demo), Database (Active), and Client (Harkins Manufacturing (32003)). The main section shows 'Document Search Results' with 148 results. A table lists document details:

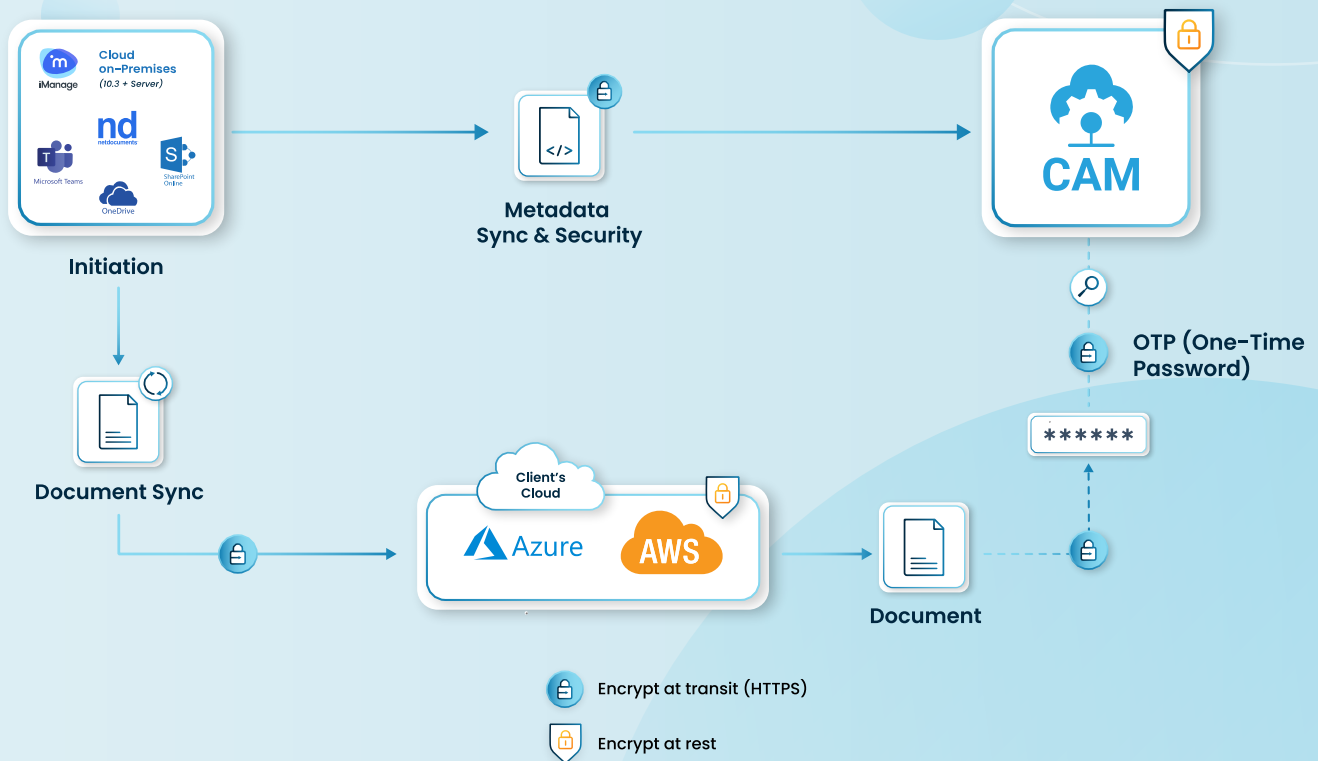

Type	Database	Client	Matter	Author	Document Number	Doc Name	Create Date	Last Edited	Version	Declared Record	Class	Subclass
Active	32003 (Harkins Manufacturing)	47956 (Harkins Manufacturing v. Sky Pink Inc)							1			
Active	32003 (Harkins Manufacturing)	47956 (Harkins Manufacturing v. Sky Pink Inc)							1

Plan for incident responses with CAM Data Protection for Business Continuity & Archival

KEY BENEFITS:

- Effortless access to important and time-sensitive organization and client work-product
- Tested data protection plan in place
- Protect sensitive data from malicious hackers by having a copy of all documents
- Less resource and time-draining data protection assurance
- Compliance with increasing cybersecurity and privacy requirements

SEAMLESS WORKFLOW EXPERIENCE

ABOUT PROSPEROWARE

Prosperoware helps teams collaborate more efficiently and securely. A client relationship or project can spawn millions of data points, documents, participants, and actions – across dozens of systems. Without an organizing agent, chaos and risk result. Prosperoware is the organizing agent to help information move through your business safely and effectively.
