# PowerDesktop –
The Hybrid Desktop Client for Power Users in Collaboration Systems

Firms face challenges in efficiently and securely handling their documents and email movement across organizations or firms. This happens due to the large amount of data to be moved, the complex folder structures across their workspaces, the manual processes involved, the large resources required, and the intensive technical training needed for staff members.

That's why firms need a solution that handles all data transfer challenges with ease while reducing costs, increasing efficiency, and requiring minimal training for users.

PowerDesktop is the hybrid desktop client for power users in collaboration systems. It is compatible with the iManage 10.3+ on premises, and all iManage cloud offerings, using the Universal API.

PowerDesktop is an intuitive and user-friendly tool designed to tackle all power user and data transfer challenges with ease. It enables users to quickly import, export, and map documents in any way they need while removing any duplicates and other transfer errors, locate and access documents instantly, and reduce time & cost with automated processes for bulk manipulations.

Key Features:

PowerDesktop Bulk Operations (Import & Export):

- Perform bulk operations across tens of thousands of documents.

- Eliminates the restrictions of accessing more than 9,999 documents or folders.

- Easily Import tens of thousands of files, folder structures, and emails from a folder structure or CSV file into the DMS. Allows for easy document mapping into workspace folders at any level to enable the transfer of matter files between firms.

- Export documents, folders, and workspaces in bulk with features to handle special characters, long file paths, and more.

PowerDesktop.PST Export:

- Extract PST files and folder structures into the Windows file system. Once extracted, use Import to import into folder, or map a CSV import.

Instantly Tackle All Your Power User Challenges

Access Documents Instantly

Easily identify, view, locate, and access more than 10,000 documents in a folder with preserved content structures and dates.

Searching Made Easy

Effortlessly search for documents by any combination of document properties. And then add or modify document metadata for easy search.

Enhance Productivity

Efficiently import thousands of documents into or create multi-level folder structures.

Save Time & Cost

Clearly set path truncation values at the workspace, folder, and document name levels and avoid failed exports due to a long folder path.

Minimized Errors

Quick detection of CSV file errors allowing you to correct before upload.

Client Satisfaction

Quickly and accurately deliver client data upon request.

Meet Your Data Movement Needs with Ease
